

## iAeris Indoor Air Quality Detector with Microsoft Azure Sphere inside

☒ More Secure    ☒ More Accurate    ☒ More User-Friendly

### Benefit

Device	Cloud
•Device security	•Cloud security
•Device and OS update	•Online OS error reports

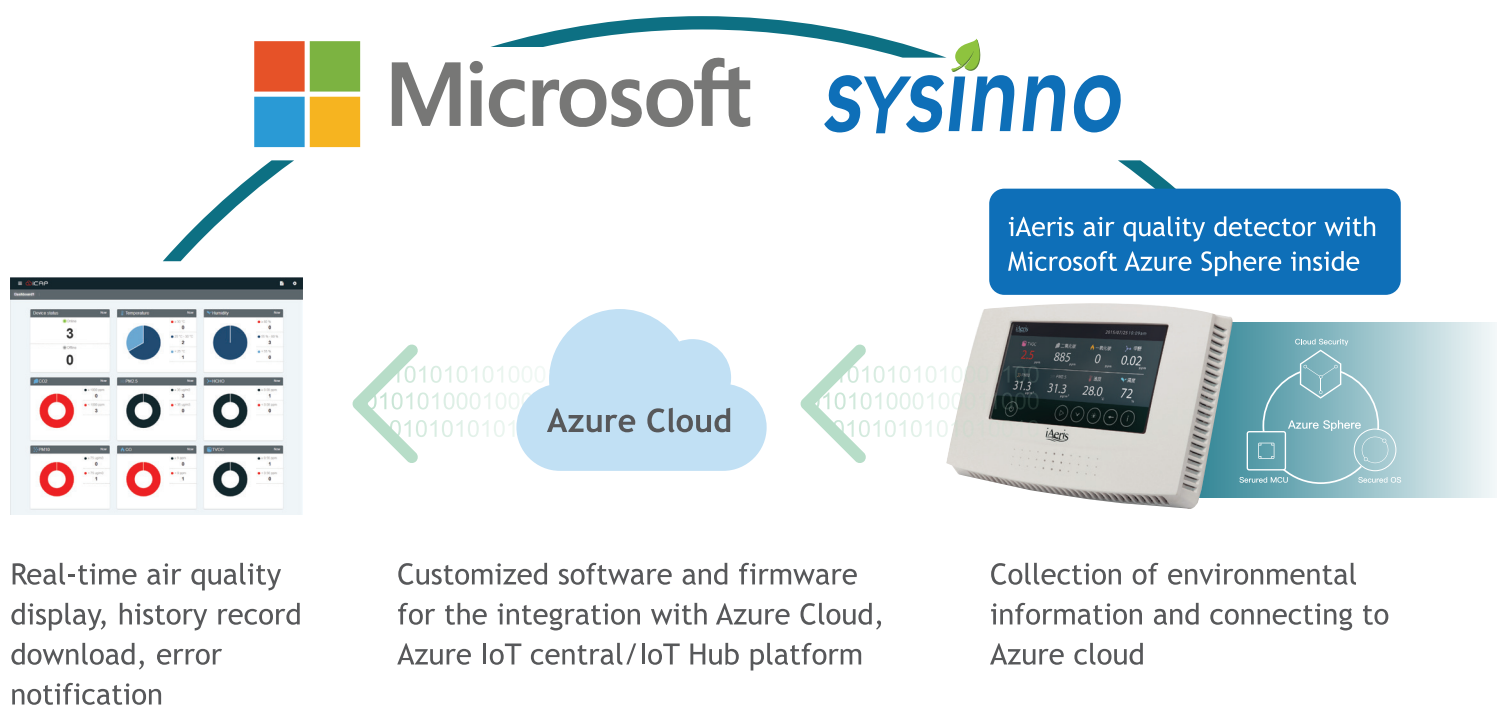

## iAeris air quality detector advantages

- Anti-noise electrical design
- Precise algorithms
- Flexible parameter combinations
- Index performance certifications
- Relay contacts to connect to HVAC systems
- In-house calibration lab

## Application scenarios

*iAeris is a series of intelligent air quality detectors that measures several indexes of indoor air quality. They provide not only real-time information about surrounding environment conditions but also keep a history record. iAeris with Microsoft Azure Sphere inside constitutes the first step of the AIoT solution by collecting air quality information and guarantees your device security.*

## About Sysinno

Sysinno's state-of-the-art products include the iAeris series of air quality measurement units, as well as cloud-connected, IoT-enabled controllers that help provide a 360° solution to air quality concerns. In the future, Sysinno will launch more versatile environment sensors including measurements of vibration, ambient noise and atmospheric pressure. In addition, Sysinno provides customized solutions to meet its customers' requirements.
